# Series R™ Helical Rotary Liquid Chillers

**70-250 Tons Model RTWD Water-Cooled**

**70-200 Tons Model RTUD Condenserless**

**Made in USA**

# Introduction

To meet a wide range of applications in the 70–250 ton water-cooled market, Trane is proud to introduce the model RTWD helical-rotary liquid chiller. To meet a wide range of applications in the 70-200 ton condenserless market, Trane is offering the RTUD condenserless chiller. The introduction of this next-generation chiller is an exciting step forward in application versatility, ease of installation, control precision, reliability, energy-efficiency, and operational cost-effectiveness. The new chiller is designed to deliver proven Series R performance, plus all the benefits of an advanced heat transfer design with two low-speed, direct-drive compressors.

## Important Design Advances and New Features

- Higher full-load energy efficiency that meets ASHRAE 90.1 and reduces both operating and life-cycle costs.
- Variable evaporator flow compensation for improved control stability with energy saving variable flow applications.
- Single chiller time of day scheduling communication option for easier control of small jobs.
- Dual independent refrigerant circuits.
- HFC-134a optimized design.

The industrial-grade design of the Series R helical-rotary chiller is ideal for both industrial and commercial markets, in applications such as office buildings, hospitals, schools, retail buildings, and industrial facilities. The reliable compressors, wide operating temperature range, advanced controls, electronic expansion valve, short anti-recycle timers, and industry-leading efficiencies mean that this latest Trane Series R chiller is the perfect choice for tight temperature control in almost any application temperatures, and under widely varying loads.

# Features and Benefits

## Reliability

- The Trane helical rotary compressor is a proven design resulting from years of research and thousands of test hours, including extensive testing under extraordinarily severe operating conditions.
- Trane is the world's largest manufacturer of large helical rotary compressors, with more than 240,000 compressors installed worldwide.
- Direct drive, low-speed compressors—a simple design with only four moving parts—provides maximum efficiency, high reliability, and low maintenance requirements.
- Suction gas-cooled motor stays at a uniformly low temperature for long motor life.
- Electronic expansion valve, with fewer moving parts than alternative valve designs, provides highly reliable operation.

## High Performance

- Advanced design enables chilled water temperature control to  $\pm 0.5^{\circ}\text{F}$  ( $0.28^{\circ}\text{C}$ ) for flow changes up to 10 percent per minute, plus handling of flow changes up to 30 percent per minute for variable flow applications.
- Two minute stop-to-start and five minute start-to-start anti-recycle timer allows tight chilled water temperature control in constant or transient low-load applications.
- High compressor lift capabilities for use with heat recovery and waterside heat pump applications allows highly efficient system design with minimal operational concerns.
- Tight water temperature control extends to operation of multiple chillers in parallel or series configurations, offering further system design flexibility for maximum efficiency.
- Optional LonTalk/Tracer Summit communications interface provides excellent, trouble-free inter operability.

## Life Cycle Cost-Effectiveness

- Precise compressor rotor tip clearance ensures optimal efficiency.
- Condenser and evaporator tubes use the latest heat transfer technology for increased efficiency.
- Electronic expansion valve enables exceptionally tight temperature control and extremely low superheat, resulting in more efficient full-load and part-load operation than previously available.
- Chilled water reset based on return water temperature is standard.
- Electrical current-limiting is available as an option.

## Application Versatility

- **Industrial/low temperature process cooling** – Excellent operating temperature range and precise control capabilities enable tight control with single chiller or series configuration.
- **Ice/thermal storage** – Specifiers and operators benefit from dual setpoint control and industry-leading temperature, efficiency, and control capabilities, plus outstanding support through partnership with Calmac, a strong Trane partner providing proven installation examples, templates, and references that minimize design time and energy costs.
- **Heat recovery** – Maximum condenser temperature exceeds those of previous technologies, providing hot water and tight control that minimizes operating costs for the chilled water plant and boiler/hot water heater, while also providing consistent dehumidification.
- **Water to water heat pump** – For multi-chiller systems where there is a base or year-round heating load the RTWD can be used as a water side heat pump by utilizing ground or surface water as a heat source. Leaving condenser temperature control option allows for the chiller to be used and controlled primarily for the heat produced in the condenser.
- **Dry Cooler** – Allows for use with a closed condenser loop system that minimizes the potential for cross-contamination of the condenser loop.
- **Variable primary flow** – Variable evaporator flow compensation allows multi-chiller systems to vary the flow of water throughout the entire system (from the evaporator through the cooling coils). This feature also provides additional system efficiency as the number of pumps and the flow rate in the system are reduced. Standard 2 pass or optional 3 pass evaporator allows for a wider range of flow capabilities.
- **Series chiller configuration** – For two-chiller systems all the system water passes through the evaporators and/or condensers of both chillers to take advantage of system efficiency gains due to thermodynamic staging as well as downsizing the upstream chiller.
- **EarthWise system** – Low flow and high temperature differential installations allow for reduced pump and cooling-tower energy by decreasing the amount of water flow pumped through the system. This results in downsizing of all HVAC and ancillary equipment which provides installation and operational savings.

## Features and Benefits

---

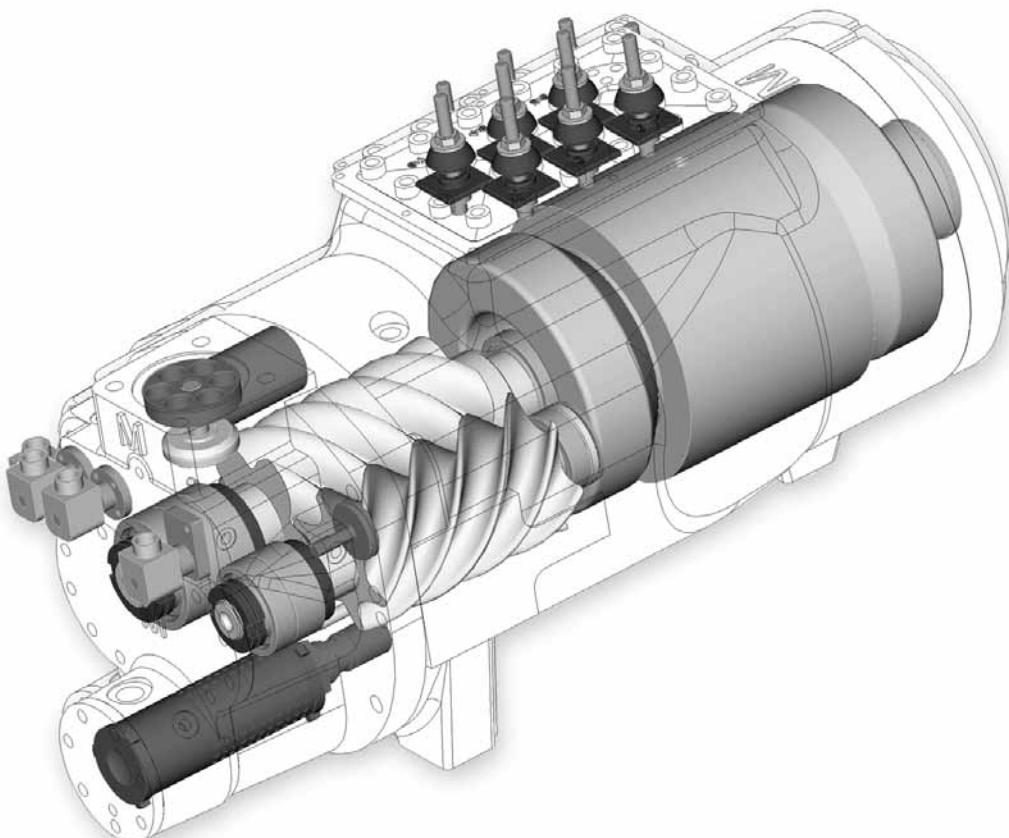

### Simple, Economical Installation

- All units fit through standard double-width doors and most units fit through single width doors. Units are designed with bolt-together construction for disassembly to fit through smaller openings.
- Small footprint saves valuable equipment room space and alleviates access concerns for most retrofit jobs.
- Lightweight design simplifies rigging requirements, further reducing installation time requirements and costs.
- Full factory refrigerant and oil charges reduce required field labor, materials, and installation cost (RTWD). An optional nitrogen charge can reduce the time and labor for projects expecting dis-assembly.
- Optional integrated forklift channels on the unit base allow for easy movement of the chiller at the job site.
- Single or dual point power connection options simplify overall installation.
- Unit-mounted starter eliminates additional job site installation considerations and labor requirements.
- Trane CH530 controls easily interface with Tracer Summit™, LonTalk™, or BACnet™ building automation systems through single twisted-pair wire.
- Trane has conducted extensive factory testing during manufacturing, and also offers options for in-person and/or documented system performance verification.

## Precision Control

- Microprocessor-based Trane CH530 controls monitor and maintain optimal operation of the chiller and its associated sensors, actuators, relays, and switches, all of which are factory-assembled and extensively tested.
- Easy interface with computers hosting LonTalk/Tracer Summit/BACnet building automation/energy management systems allows the operator to efficiently optimize comfort system performance and minimize operating costs.
- Proportional Integral Derivative (PID) control strategy ensures stable, efficient chilled water temperature, maintaining  $\pm 1^{\circ}\text{F}$  ( $0.56^{\circ}\text{C}$ ) by reacting to instantaneous load changes.
- Adaptive Control™ attempts to maintain chiller operation under adverse conditions, when many other chillers might simply shut down. This is accomplished by unloading the compressor due to high condensing pressure, low suction pressure and/or overcurrent.
- EMC certification ensures trouble-free use of electronic devices around the chiller.
- Easy-to-use operator interface displays all operating and safety messages, with complete diagnostics information, on a easily readable panel with a scrolling touch-screen display.
- New variable evaporator flow compensation maintains improved control stability of the leaving water temperature.

# Application Considerations

## Condenser Water Temperatures

With the model RTWD chiller, condenser head pressure control is necessary only if the unit starts with entering condenser water temperatures below 55°F (12.8°C), or between 45°F (7.2°C) and 55°F (12.8°C), when a temperature increase of 1°F (0.56°C) per minute to 55°F (12.8°C) is not possible.

When the application requires startup temperatures below the prescribed minimums, a variety of system implementation options are available including the use of a 2- or 3-way valve or tower bypass to maintain the required system refrigerant differential pressure.

- To control a 2-way or 3-way valve, select the Condenser Regulating Valve Control option for the Trane CH530 controls. This option enables the CH530 controls to send a signal for opening and closing the valve as necessary to maintain chiller differential refrigerant pressure. The 2-way valves are available as a ship-with option.
- Tower bypass may also be a valid control method if the chiller temperature requirements can be maintained and the loop is small.

The minimum acceptable refrigerant pressure differential between condenser and evaporator is 25 psid (1.7 bars) at all load conditions in order to ensure adequate oil circulation. Condenser leaving water temperature must be 17°F (9.5°C) higher than evaporator leaving water temperature within 2 minutes of startup. A 25°F (13.9°C) temperature difference must be maintained thereafter [this differential requirement is lessened by 0.25°F (0.14°C) for every 1°F (0.56°C) that the condenser leaving water temperature is above 55°F (12.8°C)].

Trane Series R chillers start and operate successfully and reliably over a range of load conditions with controlled condenser pressure. Reducing the condenser water temperature is an effective method of lowering chiller power input required, but the ideal temperature for optimizing total system power consumption will depend on the overall system dynamics. From a system perspective, some improvements in chiller efficiency may be offset by the increased tower fan and pumping costs required to achieve the lower tower temperatures. Contact your local Trane systems solution provider for more information on optimizing system performance.

## Variable Evaporator Flow and Short Evaporator Water Loops

Variable evaporator flow is an energy-saving design strategy which has quickly gained acceptance as advances in chiller and controls technology have made it possible. With its superior unloading compressor design and advanced Trane CH530 controls, the RTWD/RTUD has excellent capability to maintain leaving water temperature control within +/-0.5°F (0.28°C), even for systems with variable evaporator flow.

Some basic rules should be followed whenever using these system design and operational savings methods with the RTWD/RTUD. The proper location of the chilled water temperature control sensor is in the supply (outlet) water. This location allows the building to act as a buffer, and it assures a slowly changing return water temperature. If there is insufficient water volume in the system to provide an adequate buffer, temperature control can be lost, resulting in erratic system operation and excessive compressor cycling. To ensure consistent operation and tight temperature control, the chilled water loop should be at least two minutes. If this recommendation cannot be followed, and tight leaving water temperature control is necessary, a storage tank or larger header pipe should be installed to increase the volume of water in the system.

## Application Considerations

For variable primary flow applications, the rate of chilled water flow change should not exceed 10 percent of design per minute to maintain +/-0.5°F (0.28°C) leaving evaporator temperature control. For applications in which system energy savings is most important and tight temperature control is classified as +/-2°F (1.1°C), up to 30 percent change in flow per minute are possible. Flow rates should be maintained between the minimum and maximum allowed for any particular chiller configuration.

For applications designed to operate with changes in the water flow rate, the new evaporator water-flow compensation improves the ability of the chiller to respond to increasing or decreasing water flow. This new standard control feature works by varying the leaving evaporator temperature control gains in response to changes in evaporator water flow. By measuring the refrigerant flow in each circuit and using this value to calculate the resulting waterside temperature drop, the CH530 can estimate the water flow rate through the evaporator.

## Series Chiller Arrangements

Another energy-saving strategy is to design the system around chillers arranged in series, on the evaporator, condenser, or both. It is possible to operate a pair of chillers more efficiently in a series chiller arrangement than in a parallel arrangement. It is also possible to achieve higher entering-to-leaving chiller differentials, which may, in turn, provide the opportunity for lower chilled water design temperature, lower design flow, and resulting installation and operational cost savings (including downsizing a chiller).

The Trane screw compressor also has excellent "lift" capabilities which afford an opportunity for savings on the evaporator and condenser water loops. Like series arrangements on the evaporator, series arrangements on the condenser may enable savings. This approach may allow reductions in pump and tower installation and operating costs.

Maximizing system efficiency requires that the designer balance performance considerations for all system components; the best approach may or may not involve multiple chillers, or series arrangement of the evaporators and/or condensers. This ideal balance of design integrity with installation and operating cost considerations should be researched by consulting a Trane systems solutions provider and applying the Trace™ building energy and economic analysis program.

## Water-to-Water Heat Pump

The RTWD can be used as a water side heat pump by using ground or surface water as a heat source. Leaving condenser water control option provides the ability to control the heating setpoint. Local regulation concerning limitation on minimum/maximum rejected water temperature needs to be checked before using this method.

## Dry Cooler

The RTWD can be used with dry coolers. Generally this application is selected to minimize the spread of airborne contaminates associated with open tower systems. In addition, other drawbacks of cooling towers are avoided: water consumption, production of vapor, need of water treatment, etc. Another benefit of dry coolers is the ability to operate in low ambient conditions. With the use of a third party heat exchanger this design can also be used to provide free cooling to the chilled water loop during cold weather.

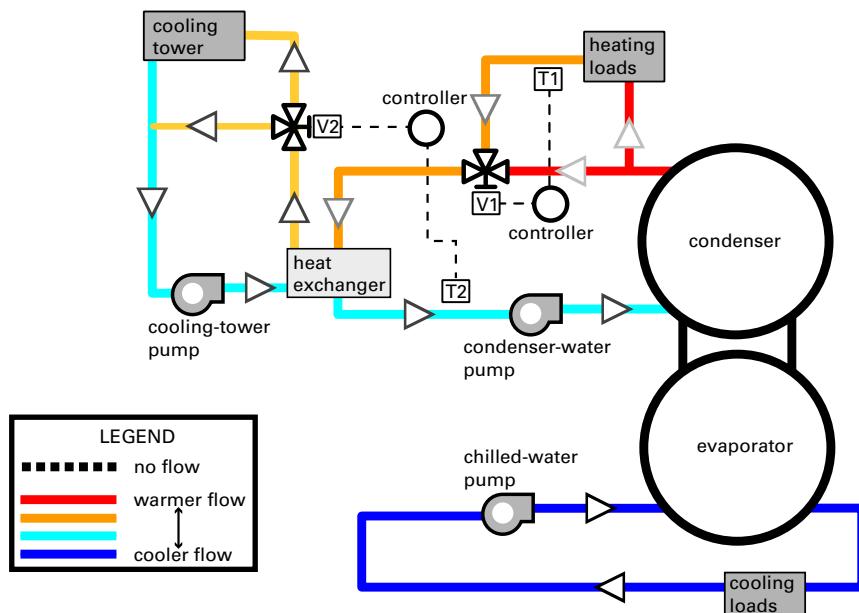

## Application Considerations

---

### Heat Recovery

At a time when energy costs are high and continue to rise, reducing energy usage has become increasingly important. By using a RTWD chiller with heat recovery, utilization of energy can be improved by using heat from the condenser that would otherwise be wasted.

The use of heat recovery should be considered in any building with simultaneous heating and cooling requirements or in facilities where heat can be stored and used at a later time. Buildings with high year-round internal cooling loads are excellent opportunities for heat recovery. Heat recovery can be accomplished with the RTWD by recovering heat from the water leaving the standard condenser and using it in conjunction with a third party heat exchanger.

### Water Treatment

The use of untreated or improperly treated water in chillers may result in scaling, erosion, corrosion, and algae or slime buildup. It is recommended that the services of a qualified water treatment specialist be engaged to determine what treatment, if any, is advisable.

### Water Pumps

Where noise limitation and vibration-free operation are important, Trane strongly encourages the use of 1750-rpm (60 Hz) [1450-rpm (50 Hz)] pumps. Specifying or using 3600-rpm (60 Hz) [3000-rpm (50 Hz)] condenser water and chilled water pumps must be avoided, because such pumps may operate with objectionable levels of noise and vibration. In addition, a low frequency beat may occur due to the slight difference in operating rpm between 3600-rpm (60 Hz) [3000-rpm (50 Hz)] water pumps and Series R chiller motors.

**Note:** The chilled water pump must not be used to stop the chiller.

## Acoustic Considerations

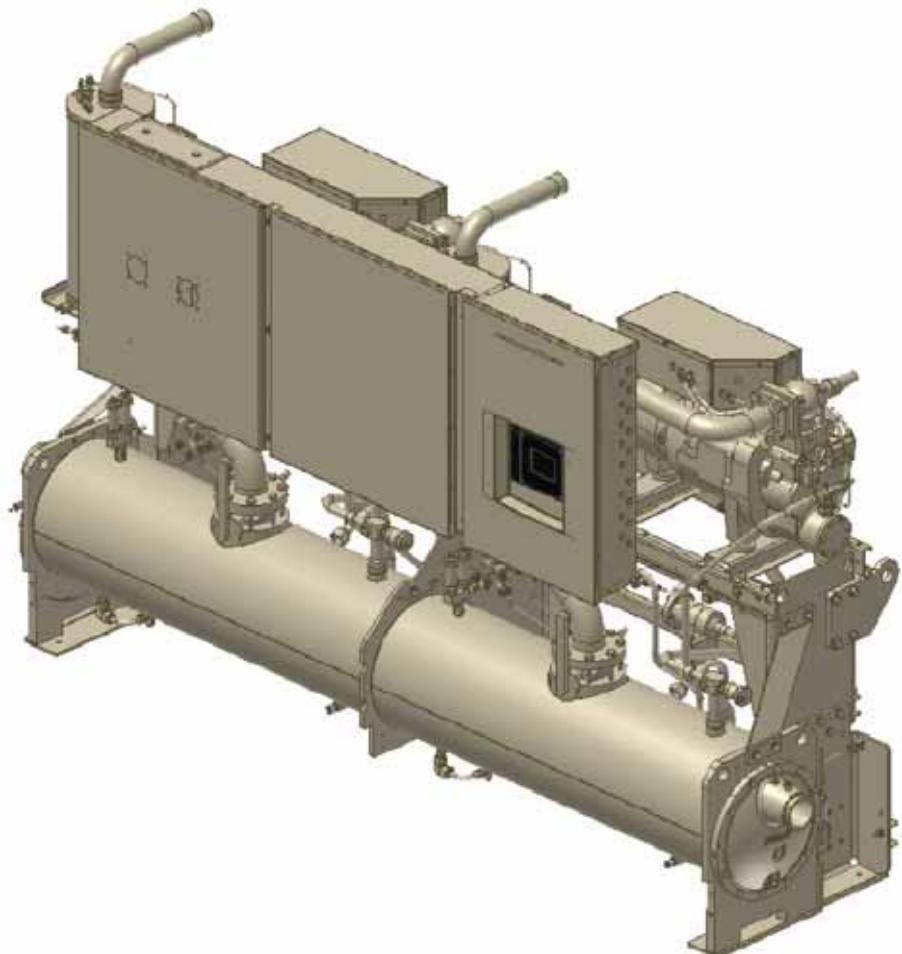

For chiller sound ratings, installation tips, and considerations on chiller location, pipe isolation, etc., refer to *the Water-Cooled Series R Chillers Sound Ratings and Installation Guide*.

## Remote Condenser

The installation of a split system offers a good economic alternative to satisfy the chilled water demand for cooling a building, particularly in the case of new construction.

The choice of a complete Trane system, including the compressor chiller and the condenser offers the designer, installer and owner the advantages of an optimized selection and undivided responsibility for the design, the quality and the operation of the complete system.

Remote condensers should be located as close as possible to the chiller to ensure minimum pressure drops of discharge refrigerant. If non-Trane condensers are provided, a subcooling circuit must be provided in order to achieve catalogued performances.

# Model Number Descriptions

## Digits 01, 02, 03, 04 – Chiller Model

RTWD = Water-Cooled Series R™ Chiller  
RTUD = Compressor Series R Chiller

## Digit 05, 06, 07 – Unit Nominal Tonnage

060 = 60 Nominal Tons  
070 = 70 Nominal Tons  
080 = 80 Nominal Tons  
090 = 90 Nominal Tons  
100 = 100 Nominal Tons  
110 = 110 Nominal Tons  
120 = 120 Nominal Tons  
130 = 130 Nominal Tons  
140 = 140 Nominal Tons  
150 = 150 Nominal Tons  
160 = 160 Nominal Tons  
180 = 180 Nominal Tons  
200 = 200 Nominal Tons  
220 = 220 Nominal Tons  
250 = 250 Nominal Tons

## Digit 08 – Unit Voltage

A = 200/60/3  
B = 230/60/3  
D = 380/60/3  
E = 400/50/3  
F = 460/60/3  
G = 575/60/3

## Digit 09 – Manufacturing Plant

2 = Pueblo, USA

## Digit 10, 11 – Design Sequence

\*\* = First Design, etc. increment when parts are affected for service purposes

## Digits 12 – Unit Type

1 = Standard Efficiency/Performance  
2 = High Efficiency/Performance  
3 = Premium Efficiency/Performance

## Digit 13 – Agency Listing

0 = No Agency Listing  
A = UL Listed to US and Canadian Safety Standards  
S = Special

## Digit 14 – Pressure Vessel Code

1 = ASME Pressure Vessel Code  
3 = Chinese Code-Imported Pressure Vessel  
S = Special

## Digit 15 – Unit Application

A = Std Condenser <=95°F/35°C Entering Water Temperature  
B = High Temperature Condenser >95°F/35°C Entering Water Temperature  
C = Water-to-Water Heat Pump  
D = Remote Condenser by Trane  
E = Remote Condenser by Others

## Digit 16 – Pressure Relief Valve

1 = Single Relief Valve  
2 = Dual Relief Valve with 3-Way Isolation Valve

## Digit 17 – Water Connection Type

A = Grooved Pipe Connection

## Digit 18 – Evaporator Tubes

A = Internal and External Enhanced Evap Tube

## Digit 19 – Number of Evap Passes

1 = 2 Pass Evaporator  
2 = 3 Pass Evaporator

## Digit 20 – Evaporator Water Side Pressure

A = 150 psi/10.5 bar Evaporator Water Pressure

## Digit 21 – Evaporator Application

1 = Standard Cooling  
2 = Low Temperature  
3 = Ice Making

## Digit 22 – Condenser Tubes

X = Remote Condenser  
A = Enhanced Fin - Copper  
B = Internally Enhanced 90/10 CuNi Fin

## Digit 23 – Condenser Water Side Pressure

0 = Remote Condenser  
1 = 150 psi/10.5 Bar Condenser Water Pressure

## Digit 24 – Compressor Starter Type

Y = Wye-Delta Closed Transition Starter  
X = Across-the-Line Starter

## Digit 25 – Incoming Power Line Connection

1 = Single Point Power Connection  
2 = Dual Point Power Connection

## Digit 26 – Power Line Connection Type

A = Terminal Block Connection for Incoming Lines  
B = Mechanical Disconnect Switch  
D = Circuit Breaker  
E = High Fault Rated Panel with Circuit Breaker

## Digit 27 – Under/Over Voltage Protection

0 = No Under/Over Voltage Protection  
1 = Under/Over Voltage Protection

## Digit 28 – Unit Operator Interface

A = Dyna-View/English  
B = Dyna-View/Spanish  
C = Dyna-View/Spanish-Mexico  
D = Dyna-View/French  
E = Dyna-View/German  
F = Dyna-View/Dutch  
G = Dyna-View/Italian  
H = Dyna-View/Japanese  
J = Dyna-View/Portuguese-Portugal  
K = Dyna-View/Portuguese-Brazil  
L = Dyna-View/Korean  
M = Dyna-View/Thai  
N = Dyna-View/Simplified Chinese  
P = Dyna-View/Traditional Chinese  
R = Dyna-View/Russian  
T = Dyna-View/Polish  
U = Dyna-View/Czech  
V = Dyna-View/Hungarian  
W = Dyna-View/Greek  
X = Dyna-View/Romanian  
Y = Dyna-View/Swedish

### **Digit 29 – Remote Interface (Digital Comm)**

0 = No Remote Digital Communication  
1 = LonTalk/Tracer Summit Interface  
2 = Time of Day Scheduling

### **Digit 30 – External Water & Current-Limit Setpoint**

0 = No External Water & Current-Limit Setpoint  
A = External Water & Current-Limit Setpoint - 4–20 mA  
B = External Water & Current-Limit Setpoint - 2–10 Vdc

### **Digit 31 – Ice Making**

0 = No Ice Making  
A = Ice Making with Relay  
B = Ice Making without Relay

### **Digit 32 – Programmable Relays**

0 = No Programmable Relays  
A = Programmable Relays

### **Digit 33 – Condenser Refrigerant Pressure Output Option**

0 = No Condenser Refrigerant Output  
1 = Condenser Water Control Output  
2 = Condenser Pressure (%HPC) Output  
3 = Differential Pressure Output

### **Digits 34 – Outdoor Air Temp Sensor**

0 = No Outdoor Air Temp Sensor  
A = Outdoor Air Temp Sensor-CWR/Low Ambient

### **Digit 35 – Condenser Leaving Hot Water Temp Control**

0 = No Condenser Leaving Hot Water Temp Control  
1 = Condenser Leaving Hot Water Temp Control

### **Digit 36 – Power Meter**

0 = No Power Meter  
P = Power Meter

### **Digit 37 – Motor Current Analog Output (%RLA)**

0 = No Motor Current Analog Output  
1 = Motor Current Analog Output

### **Digit 38 – A/C Fan Control**

0 = No Fan Controls (RTWD)  
A = Fan Control By Others  
B = Integral Fan Controls

### **Digit 40 – Installation Accessories**

0 = No Installation Accessories  
A = Elastomeric Isolators  
B = Flanged Water Connection Kit  
C = Isolators & Flanged Water Connection Kit

### **Digit 41 – Flow Switch**

0 = No Flow Switch  
1 = 150 psi NEMA 1; Flow Switch x 1  
2 = 150 psi NEMA 1; Flow Switch x 2  
3 = 150 psi NEMA 4; Flow Switch x 1  
4 = 150 psi NEMA 4; Flow Switch x 2

### **Digit 42 – 2-Way Water Regulating Valve**

0 = No 2-Way Water Regulating Valve  
A = 3" 150 psi/88.9 mm 10.5 bar 115 V  
B = 3" 150 psi/88.9 mm 10.5 bar 220 V  
C = 4" 150 psi/114.3 mm 10.5 bar 115 V  
D = 4" 150 psi/114.3 mm 10.5 bar 220 V

### **Digit 44 – Insulation**

0 = No Insulation  
1 = Factory Insulation - All Cold Parts  
2 = Insulation for High Humidity

### **Digit 45 – Factory Charge**

0 = Full Factory Refrigerant Charge (R134a)  
1 = Nitrogen Charge

### **Digit 46 – Base Rail Forklifting**

0 = No Base Rail Forklifting  
B = Base Rail Forklifting

### **Digit 47 – Label and Literature Language**

B = Spanish  
D = English  
E = French  
G = Chinese - Traditional

### **Digit 48 – Special**

0 = None  
S = Special

### **Digit 49 – 55**

0 = None

### **Digit 56 – Shipping Package**

0 = No Skid (Standard)  
1 = Skid  
2 = Shrink Wrap  
3 = Skid + Shrink Wrap

### **Digit 59 – Performance Test Options**

0 = No Performance Test  
C = 1 Point Test with Report  
D = 2 Point Test with Report  
E = 3 Point Test with Report  
F = 4 Point Test with Report  
G = Witness 1 Point Test with Report  
H = Witness 2 Point Test with Report  
J = Witness 3 Point Test with Report  
K = Witness 4 Point Test with Report

1. Rated in accordance with AHRI Standard 550/590, based on evaporator temperature drop of 10°F, 3 gpm/ton on the condenser, evaporator fouling factor of 0.0001°F·ft<sup>2</sup>·h/Btu and condenser fouling factor of 0.00025°F·ft<sup>2</sup>·h/Btu.

2. Performance is based on 2 pass evaporator configuration.

3. Consult Trane representative for additional performance information.

4. kW input is for compressors only.

5. EER – Energy Efficiency Ratio (Btu/W·h). Power inputs include compressors and control power.

6. Interpolation between points is permissible. Extrapolation is not permitted.

1. Rated in accordance with AHRI Standard 550/590, based on evaporator temperature drop of 10°F, 3 gpm/ton on the condenser, evaporator fouling factor of 0.0001°F·ft<sup>2</sup>·h/Btu and condenser fouling factor of 0.00025°F·ft<sup>2</sup>·h/Btu.

2. Performance is based on 2 pass evaporator configuration.

3. Consult Trane representative for additional performance information.

4. kW input is for compressors only.

5. EER – Energy Efficiency Ratio (Btu/W·h). Power inputs include compressors and control power.

6. Interpolation between points is permissible. Extrapolation is not permitted.

1. Rated in accordance with AHRI Standard 550/590, based on evaporator temperature drop of 10°F, 3 gpm/ton on the condenser, evaporator fouling factor of 0.0001°F·ft<sup>2</sup>·h/Btu and condenser fouling factor of 0.00025°F·ft<sup>2</sup>·h/Btu.

2. Performance is based on 2 pass evaporator configuration.

3. Consult Trane representative for additional performance information.

4. kW input is for compressors only.

5. EER – Energy Efficiency Ratio (Btu/W·h). Power inputs include compressors and control power.

1. Rated in accordance with AHRI Standard 550/590, based on evaporator temperature drop of 10°F, evaporator fouling factor of 0.0001°F·ft<sup>2</sup>·h/Btu, sea level altitude.

2. Performance is based on 2 pass evaporator configuration.

3. Consult Trane representative for additional performance information.

4. kW input is for compressors and control power.

5. EER – Energy Efficiency Ratio (Btu/W·h). Power inputs include compressors and control power.

6. Interpolation between points is permissible. Extrapolation is not permitted.

1. Rated in accordance with AHRI Standard 550/590, based on evaporator temperature drop of 10°F, evaporator fouling factor of 0.0001°F·ft<sup>2</sup>·h/Btu and Trane air-cooled condenser with an ambient air at 100% of 95°F.

2. Performance is based on 2 pass evaporator configuration.

3. EER - Energy Efficiency Ration (Btu/W·h). Power inputs include compressors and control power.

1. Rated in accordance with AHRI Standard 550/590, based on an evaporator temperature drop of 5°C, evaporator fouling factor of 0.01761°K·m³/kW and sea level altitude.

2. Performance is based on 2 pass evaporator configuration.

3. Consult Trane representative for additional performance information.

4. kW Input is for compressors and control power.

5. COP=Coefficient of Performance. Power inputs include compressors and control power.

6. Interpolation between points is permissible. Extrapolation is not permitted.

1. Based on an evaporator temperature drop of 5°C, evaporator fouling factor of 0.01761°K·m³/kW and sea level altitude, 10°C sub-cooling.

2. Performance is based on 2 pass evaporator configuration.

3. Consult Trane representative for additional performance information.

4. kW input is for compressors and control power.

5. COP—Coefficient of Performance. Power inputs include compressors and control power.

6. Interpolation between points is permissible. Extrapolation is not permitted.

1. Rated in accordance with AHRI Standard 550/590, based on an evaporator temperature drop of 5.6°C, 3 gpm/ton on the condenser, evaporator fouling factor of 0.01761°K·m³/kW and condenser fouling of 0.044025°K·m³/kW.

2. Performance is based on 2 pass evaporator configuration.

3. Consult Trane representative for additional performance information.

4. kW Input is for compressors only.

5. COP—Coefficient of Performance. Power inputs include compressors and control power.

7. Interpolation between points is permissible. Extrapolation is not permitted.

1. Rated in accordance with AHRI Standard 550/590, based on evaporator temperature drop of 10°F, 3 gpm/ton on the condenser, evaporator fouling factor of 0.0001°F·ft<sup>2</sup>·h/Btu and condenser fouling factor of 0.00025°F·ft<sup>2</sup>·h/Btu.
2. Performance is based on 2 pass evaporator configuration.
3. Consult Trane representative for additional performance information.
4. kW input is for compressors only.
5. EER – Energy Efficiency Ratio (Btu/W·h). Power inputs include compressors and control power.
6. Interpolation between points is permissible. Extrapolation is not permitted.

# Controls

## LCD Touch-Screen Display with Multi-Language Support

The standard DynaView display provided with the Trane CH530 control panel features an LCD touch-screen, allowing access to all operational inputs and outputs. This display supports many languages including: English, Chinese, Dutch, French, German, Italian, Japanese, Korean, Portuguese, Spanish, and Thai.

### Display Features Include:

- LCD touch-screen with LED backlighting, for scrolling access to input and output operating information
- Single-screen, folder/tab-style display of all available information on individual components (evaporator, condenser, compressor, etc.)
- Manual override indication
- Password entry/lockout system to enable or disable display
- Automatic and immediate stop capabilities for standard or immediate manual shutdown
- Fast, easy access to available chiller data in tabbed format, including:
  - Modes of operation, including normal cooling and ice making
  - Water temperatures and setpoints
  - Loading and limiting status and setpoints
  - Average line current
  - Outdoor air temperature
  - Start/stop differential timers
  - Auto/Manual mode for EXV, slide valve, and head pressure control
  - Pump status and override
  - Chilled water reset settings
  - Optional external setpoints, including:
    - i. Chilled water
    - ii. Current-limit
    - iii. Condenser leaving hot water temperature setpoint
    - iv. Ice building
- Reports, listed on a single tabbed screen for easy access, including:
  - ASHRAE, containing all guideline 3 report information
  - Evaporator
  - Condenser
  - Compressor

## Controls

---

- Evaporator, condenser, and compressor reports containing all operational information on individual components, including:
  - Water temperatures
  - Refrigerant pressures, temperatures, and approach
  - Oil pressure
  - Flow switch status
  - EXV position
  - Head pressure control command
  - Compressor starts and run-time
  - Line phase percent RLA, amps, and volts
- Alarm and diagnostic information, including:
  - Flashing alarms with touch-screen button of alarm condition
  - Scrollable list of last ten active diagnostics
  - Specific information on applicable diagnostic from list of over one-hundred
  - Automatic or manual resetting diagnostic types

### **LonTalk/Tracer Summit Interface**

LonTalk (LCI-C) or Tracer Summit communications capabilities are available, with communication link via single twisted-pair wiring to factory-installed, tested communication board.

Required features:

- LonTalk/Tracer Summit Interface

Additional options that may be used:

- Ice making
- Chilled water temperature reset - outdoor air

External devices required:

- Trane Tracer system or LonTalk compatible system level interface.

Easy Operation and Maintenance

- Remote monitoring and control
- Displays both current operation conditions and scheduled automated control actions
- Concise reports assist in planning for preventative maintenance and verifying performance
- Alarm notification and diagnostic messages aid in quick and accurate troubleshooting

When integrated with a Tracer Summit building management system the total building operation can be optimized. With this system option, the full breadth of Trane's HVAC and controls experience are applied to offer solutions to many facility issues.

### **LonTalk Chiller Controls**

LonTalk is a communications protocol developed by the Echelon™ Corporation. The LonMark™ association develops control profiles using the LonTalk communication protocol. LonTalk is a unit level communications protocol.

LonTalk Communications Interface for Chillers (LCI-C) provides a generic automation system with the LonMark chiller profile inputs/outputs. In addition to the standard points, Trane provides other commonly used network output variables for greater interoperability with any automation system. The complete reference list of Trane LonTalk points is available on the LonMark web site.

Trane controls or another vendor's system can use the predefined list of points with ease to give the operator a complete picture of how the system is running.

## Tracer Summit

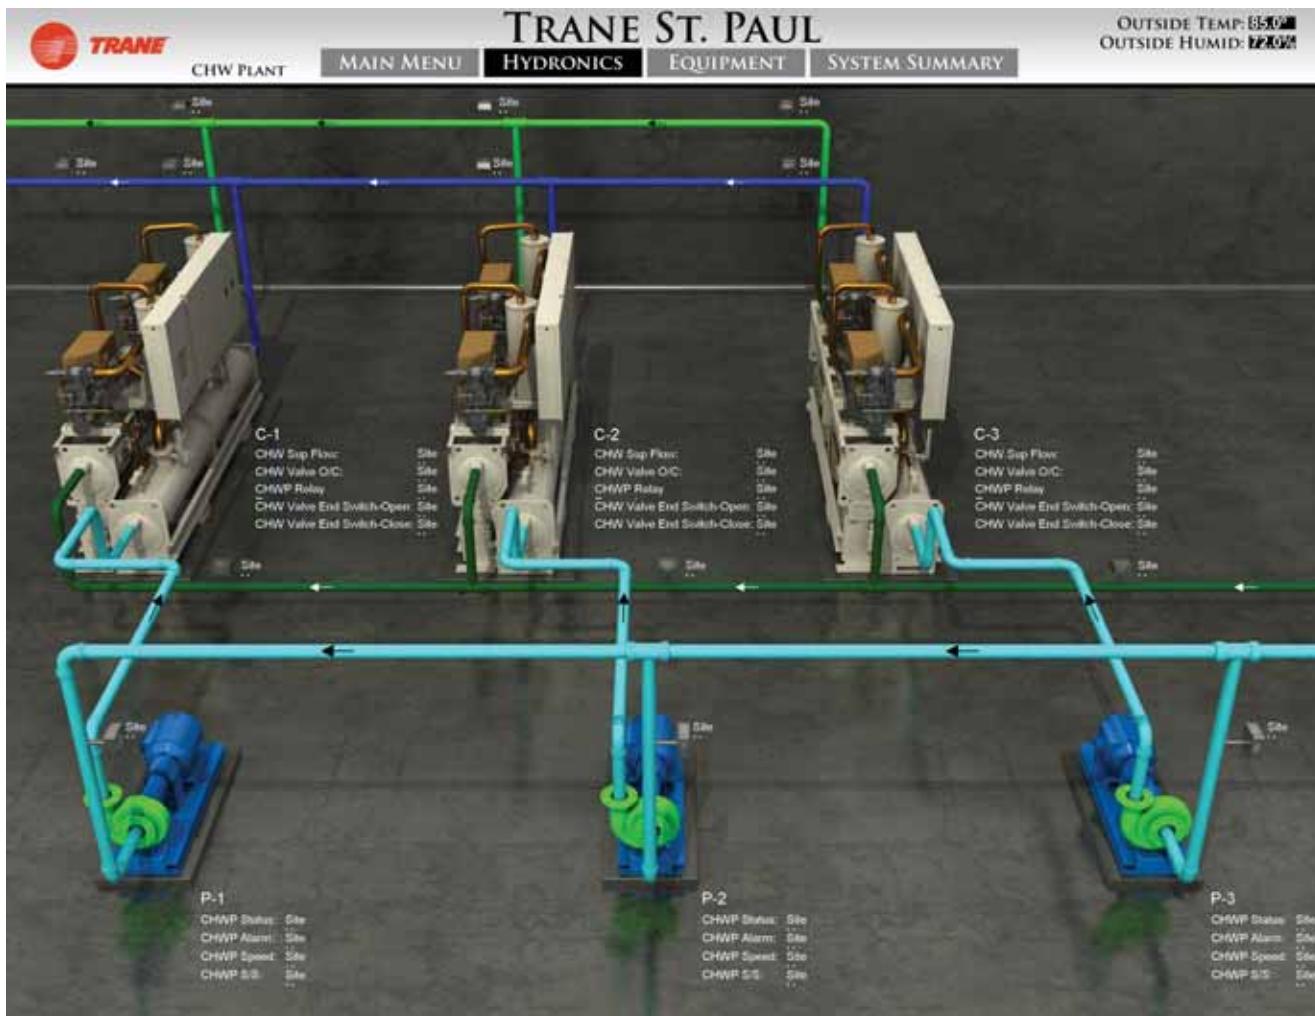

Trane's depth of experience in chillers and controls makes us a well-qualified choice for automation of chiller plants using water-cooled Series R chillers. The chiller plant control capabilities of the Trane Tracer Summit™ building automation system are unequaled in the industry. Our chiller plant automation software is fully pre-engineered and tested.

### Energy Efficiency

- Sequences starting of chillers to optimize the overall chiller plant energy efficiency
- Individual chillers operate as base, peak, or swing based on capacity and efficiency
- Automatically rotates individual chiller operation to equalize runtime and wear between chillers.
- Evaluates and selects the lowest energy consumption alternative from an overall system perspective.

### Regulatory Compliance Documentation

- Gathers information and generates the reports mandated in ASHRAE Guideline 3.

## Controls

---

### BACnet Communication Interface

BACnet communications capabilities are available, with communication link via single twisted-pair wiring.

Required features:

- BACnet Interface

Additional options that may be used:

- Ice making
- Chilled water temperature reset - outdoor air

External devices required:

- BACnet MS/TP network.

### BACnet Chiller Controls

BACnet is an open standard communications protocol used by building automation systems. BACNet MS/TP uses RS-485 hardware. This device is a non-programmable communication module that connects directly to the CH530 chiller control.

### Time of Day Scheduling

Time of day scheduling allows the customer to perform simple chiller scheduling without the need for a building automation system.

This feature allows the user to set 10 events in a 7 day time period. For each event the user can specify an activation time and the days of the week the event is active. Any setpoints available can be specified for each event, such as the leaving chilled water temperature (standard) and the current-limit setpoint (optional if ordered).

Required features:

- Time of day scheduling

Additional options that if ordered may be incorporated into the scheduling:

- External chilled water setpoint
- External current-limit setpoint
- Condenser leaving hot water temperature setpoint
- Ice making initiation

### Hardwire Points

Remote devices wired from the control panel are another reliable method of providing auxiliary control to a building automation system. Inputs and outputs can be communicated via a typical 4–20 mA electrical signal, an equivalent 2–10 Vdc signal, or by utilizing contact closures.

Selectable options:

- External chilled water setpoint/External current-limit setpoint
- Ice making control
- Condenser leaving hot water temperature control
- Chilled water temperature reset
- Condenser pressure output
- Motor current analog output
- Programmable relays available outputs are: alarm-latching, alarm-auto reset, general alarm, warning, chiller limit mode, compressor running, head pressure relief request, and Tracer control

1. MCA—minimum circuit ampacity
2. MOP—maximum overcurrent protection

3. RLA-rated load amps are rated in accordance with UL Standard 1995.

4. LRA—locked rotor amps are based on full winding starts.

5. LRA YD—Locked Rotor Amps in Wye configuration. LRA XL—Locked Rotor Amps in the Delta configuration.

6. Local codes may take precedence.

7. Data containing information on two circuits shown as follows: circuit 1/circuit 2.

8. Standard condensing temperature option refers to entering condenser water temperatures 95°F (35°C) and below.

1. MCA—minimum circuit ampacity

2. MOP—maximum overcurrent protection

3. RLA-rated load amps are rated in accordance with UL Standard 1995.

4. LRA—locked rotor amps are based on full winding starts.

5. LRA YD—Locked Rotor Amps in Wye configuration. LRA XL—Locked Rotor Amps in the Delta configuration.

6. Local codes may take precedence.

7. Data containing information on two circuits shown as follows: circuit 1/circuit 2.

8. High condensing temperature option refers to entering condenser water temperatures above 95°F (35°C).

1. MCA—minimum circuit ampacity

2. MOP—maximum overcurrent protection

3. FLA—fan rated load amps

4. Local codes may take precedence.

5. Information is the same for both circuits unless it is shown as: circuit 1/circuit 2.

1. Optional non-fused disconnect and circuit breaker.

2. Copper wire only, based on nameplate minimum circuit ampacity (MCA).

3. Standard condensing temperature option refers to entering condenser water temperatures 95°F (35°C) and below.

4. Circuit two information is the same as circuit one unless listed on a separate line below circuit one values.

5. XL - across-the-line starter and YD - wye-delta starter.

1. Optional non-fused disconnect and circuit breaker.

2. Copper wire only, based on nameplate minimum circuit ampacity (MCA).

3. Standard condensing temperature option refers to entering condenser water temperatures 95°F (35°C) and below.

4. Circuit two information is the same as circuit one unless listed on a separate line below circuit one values.

5. XL - across-the-line starter and YD - wye-delta starter.

1. Optional non-fused disconnect and circuit breaker.

2. Copper wire only, based on nameplate minimum circuit ampacity (MCA).

3. High condensing temperature option refers to entering condenser water temperatures above 95°F (35°C).

4. Circuit two information is the same as circuit one unless listed on a separate line below circuit one values.

5. XL - across-the-line starter and YD - wye-delta starter.

1. Optional non-fused disconnect and circuit breaker.

2. Copper wire only, based on nameplate minimum circuit ampacity (MCA).

3. Standard condensing temperature option refers to entering condenser water temperatures 95°F (35°C) and below.

4. Circuit two information is the same as circuit one unless listed on a separate line below circuit one values.

5. XL - across-the-line starter and YD - wye-delta starter.

1. Optional non-fused disconnect and circuit breaker.

2. Copper wire only, based on nameplate minimum circuit ampacity (MCA).

3. Standard condensing temperature option refers to entering condenser water temperatures 95°F (35°C) and below.

4. Circuit two information is the same as circuit one unless listed on a separate line below circuit one values.

5. XL - across-the-line starter and YD - wye-delta starter.

---

**CAUTION**

PREGUNTA

**USE COPPER CONDUCTORS ONLY!** N'UTILISER QUE DES CONDUCTEURS EN CUIVRE! USE SOLAMENT CONDUCTORES DE COBRE! UTILICE ÚNICAMENTE CONDUCTORES DE COBRE! LAS TERMINALES DE LA UNIDAD NO ESTAN DISEÑADAS PARA ACEPTAR OTROS TIPOS DE CONDUCTORES. SI NO LO HACE, PUEDE OCASIONAR DANO AL EQUIPO.

## Electrical Connection

**Table 59. RTWD/RTUD - Field Wiring Diagram Notes**

#	Description
1	Single source power is provided as standard on these products, dual source power is optional. Field connections for single source power are made to 1X1, 1Q1, or 1Q2. When dual source power is selected the field connections for circuit #2 are made to 1X2, 1Q3, or 1Q4.
2	For voltages 200 V/60 Hz, 220V/50Hz, 380 V/60 Hz, 460 V/60 Hz, wire 26A shall be connected to H2. For voltages 230 V/60 Hz and 575 V/60 Hz, wire 26A shall be connected to H3. 400 V/50 Hz unit is factory wired with 26A connected to H3 - reconnect wire 26A to H2 for 380V/50Hz, or H4 for 415V/50Hz. H4 is only available with 400V/50Hz panels.
3	Factory installed outdoor air temperature sensor lead length to be spliced and extended by customer. 18 AWG twisted pair recommended.
4	Customer supplied power 115/60/1 or 220/50/1 to power relays. Max fuse size is 15 amps. Ground all customer supplied power supplied as required by applicable codes. Green ground screws are provided in unit control panel.
5	Wired to next unit. 22 AWG shielded communication wire equivalent to helix LF22P0014216 recommended. The sum total of all interconnected cable segments not to exceed 4500 feet. Connection topology should be daisy chain. Refer to building automation system (BAS) communication installation literature for end of line termination resistor requirements.
6	Wired to Tracer or other Trane remote device. 22 AWG shielded communication wire equivalent to helix LF22P0014216 recommended. The sum total of all interconnected cable segments not to exceed 4500 feet. Connection topology should be daisy chain. Refer to building automation system (BAS) communication installation literature for end of line termination resistor requirements
7	Wired to compressor % RLA.
8	Wired to condenser control customer selectable function.
9	Wired to customer chilled water setpoint 2-10 V or 4-20 mA.
10	Wired to customer current limit setpoint 2-10 V or 4-20 mA.
11	Refer to RTWD/RTUD electrical schematic for specific electrical connection information and notes pertaining to wiring installation.
12	All unit power wiring must be 600-V copper conductors only and have a minimum temperature insulation rating of 75°C. Refer to unit nameplate for minimum circuit ampacity and maximum overcurrent protection device. Provide an equipment ground in accordance with applicable electric codes.
13	All field wiring must be in accordance with national electric code and local requirements.
14	All customer control circuit wiring must be copper conductors only and have a minimum insulation rating of 300 volts. Except as noted, all customer wiring connection are made to circuit board mounted box lugs with a wire range of 14 to 18 AWG.
15	Unit provided dry contacts for the condenser/chilled water pump control. Relays are rated for 7.2 amps resistive, 2.88 amps pilot duty, or 1/3 HP, 7.2 FLA at 120 volts 60Hz. Contacts are rated for 5 A general purpose duty 240-V.
16	Customer supplied contacts for all low voltage connections must be compatible with dry circuit 24 VDC for a 12 mA resistive load. Silver or gold plated contacts recommended.
17	Flow switch and interlock contacts must be acceptable for use in a 120-V, 1-mA circuit or a 220-V, 2-mA circuit.
18	Only present on "ED" frame molded case switches. 1X7, 1X8, 27A, 28A, 29A, 30A, 31A, and 32A are not present with all other molded case switches.
19	Wires are connected to normally open dry contacts for circuit 1 condenser fan control relays are rated for 7.2 amps resistive, 2.88 amps pilot duty, or 1/3 HP, 7.2 FLA at 120-V, contacts are rated for 5 amps general purpose duty 240-V. Wires 201 and 202 enable fan group 1. Wires 203 and 204 enable fan group 2. Wires 205 and 206 enable group 3. Wires 207 and 208 enable fan group 4.
20	Wires are connected to normally open dry contacts for circuit 2 condenser fan control relays are rated for 7.2 amps resistive, 2.88 amps pilot duty, or 1/3 HP, 7.2 FLA at 120-V, contacts are rated for 5 amps general purpose duty 240-V. Wires 209 and 210 enable fan group 1. Wires 211 and 212 enable fan group 2. Wires 213 and 214 enable group 3. Wires 215 and 216 enable fan group 4.
21	Wires are connected to 0-10 VDC signal at 22mA maximum for circuit 1, group 1, condenser fan speed control.
22	Wires are connected to 0-10 VDC signal at 22mA maximum for circuit 2, group 1, condenser fan speed control.
23	Wires are connected to circuit 1, group 1, condenser fan fault feedback. Connection must be compatible with dry circuit 24 VDC for A 122-mA resistive load. Silver or gold plated contacts recommended.
24	Wires are connected to circuit 2, group 1, condenser fan fault feedback. Connection must be compatible with dry circuit 24 VDC for A 122-mA resistive load. Silver or gold plated contacts recommended.
25	1A31 (BACnet) and 1A9 (LonTalk) may not be installed on the same unit.
26	Wired to next unit. 18-AWG, 24-pF/ft, shielded communication wire recommended. the sum total of all interconnected cable segments not to exceed 4000 feet. Connection topology should be daisy chain. Limit link to 60 Trane devices or 32 devices of Trane and non-Trane manufacture.
27	Wired to Tracer or other Trane remote device. 18-AWG, 24-pF/ft, shielded communication wire recommended. the sum total of all interconnected cable segments not to exceed 4000 feet. Connection topology should be daisy chain. Limit link to 60 Trane devices or 32 devices of Trane and non-Trane manufacture.

## **Electrical Connection**

**Figure 3. Connection Diagram**

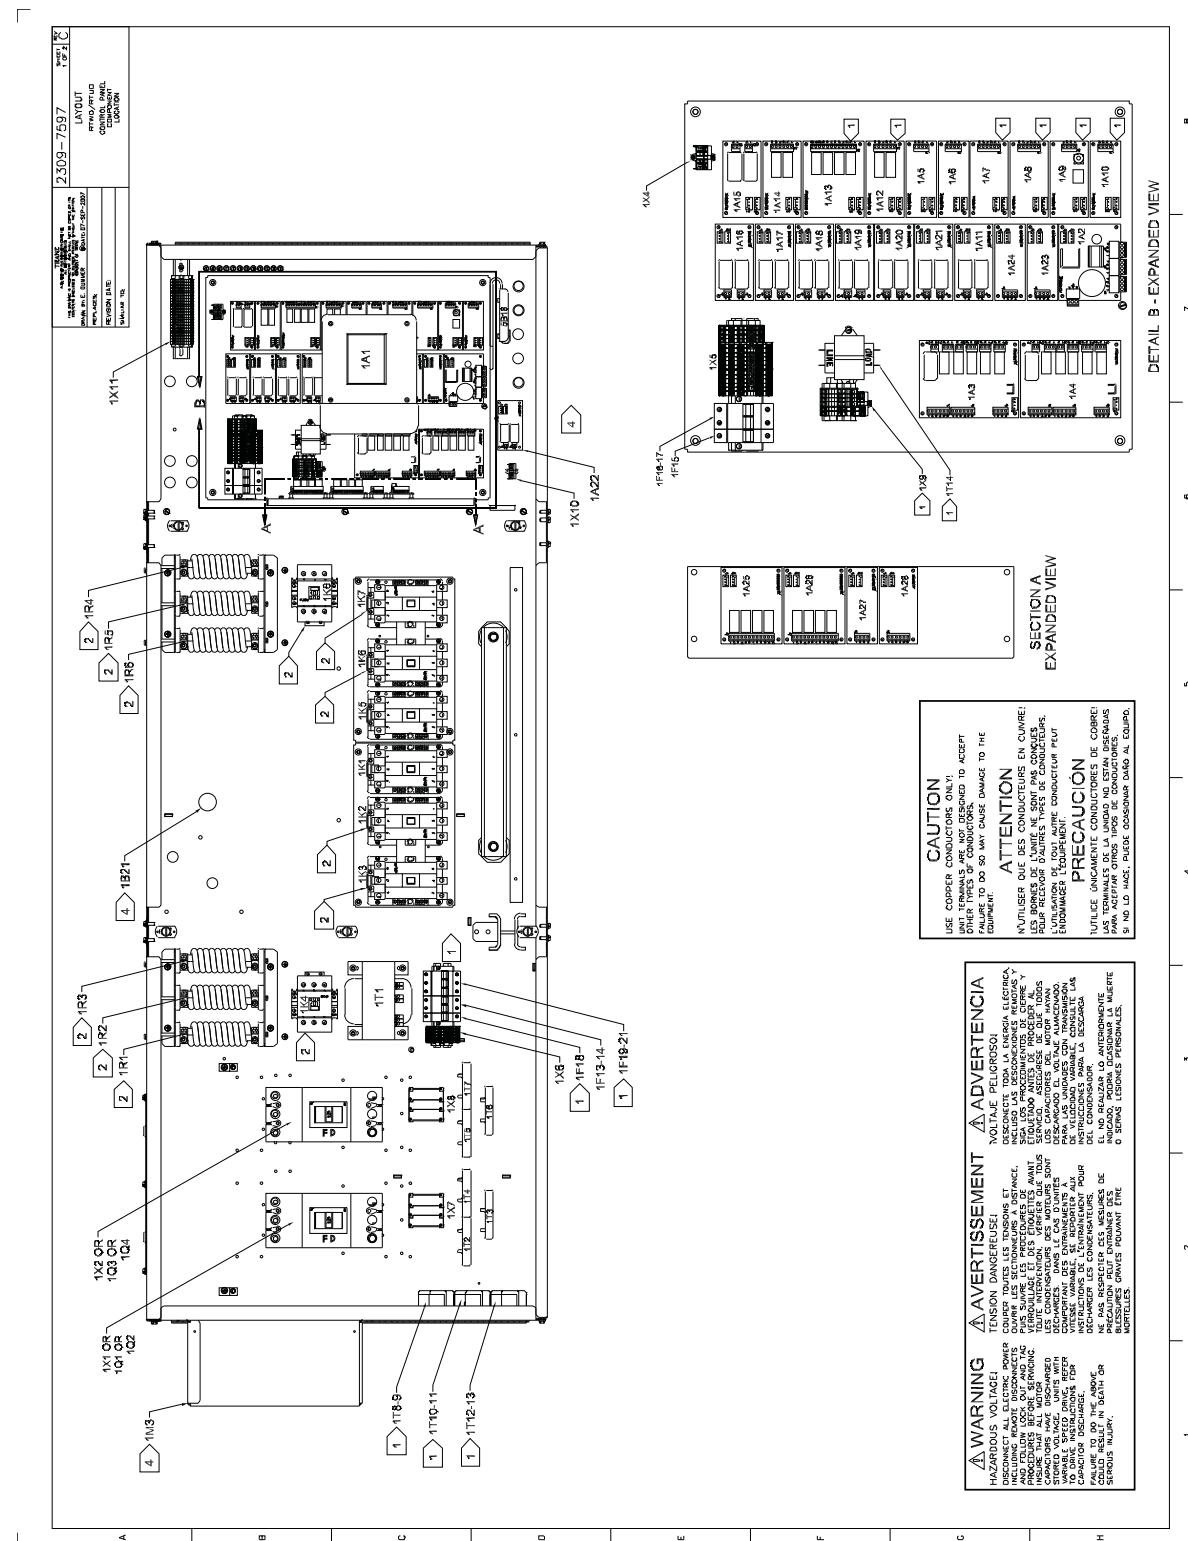

**Table 60. RTWD/RTUD Connection Diagram Notes**

#	Description	Additional Information	
1	Line voltage entrance (see unit nameplate)	location	
2	Power section	location	
3	Controls section	location	
4	Customer control power high voltage entrance	location	
5	Customer control power low voltage entrance	location	
6	Condenser and chilled water flow inputs.	optional	1A15, (5K10 and 5K9)
7	Condenser and chilled water pump relay outputs. Separate 115/60/1 or 220/50/1 customer power is required.	optional	1A14, (5K10 and 5K9)
8	Unit status programmable relay outputs. Separate 115/60/1 or 220/50/1 customer power is required.	optional	1A13, (5K12–5K19)
9	Ice making status relay output. Separate 115/60/1 or 220/50/1 customer power is required.	optional	1A12, (5K11)
10	External auto stop and emergency stop inputs.	standard	1A5, (5K23 and 5K24)
11	External circuit lockout inputs circuit 1 and circuit 2.	standard	1A6, (5K21 and 5K22)
12	External current-limit and chilled water setpoint or hot water inputs.	optional	1A7, (4-20 mA or 2-10 V)
13	Condenser control and compressor % RLA input.	optional	1A8, (4-20 mA or 0-10 V)
14	Tracer Communications	optional	1A9
15	Ice machine control and heat mode control.	optional	1A10, (5K20 and 5K25)
16	Circuit 1 disconnect	optional	1A6
17	Circuit 2 disconnect	optional	1A6
18	Wye-delta closed transition starter or across-the-line starter circuit 1A	location	
19	Wye-delta closed transition starter or across-the-line starter circuit 2A	location	
20	Refer to RTWD/RTUD electrical schematic for specific electrical connection information and notes pertaining to wiring installation.		
21	RTWD condenser control	optional	1A8
22	Outdoor air temperature sensor	optional (RTWD)	

## **Electrical Connection**

## Electrical Connection

---

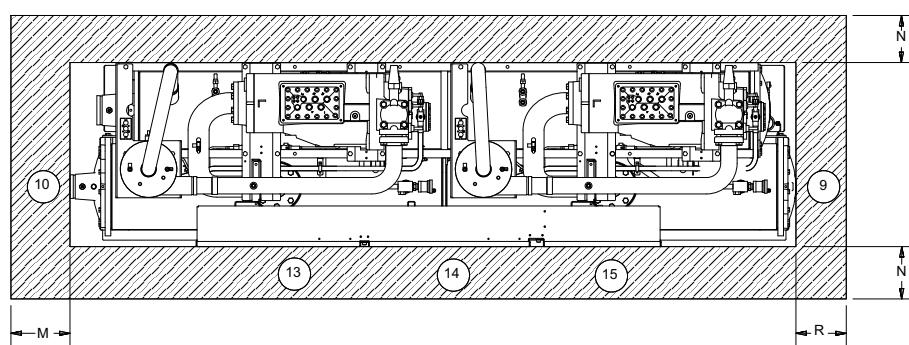

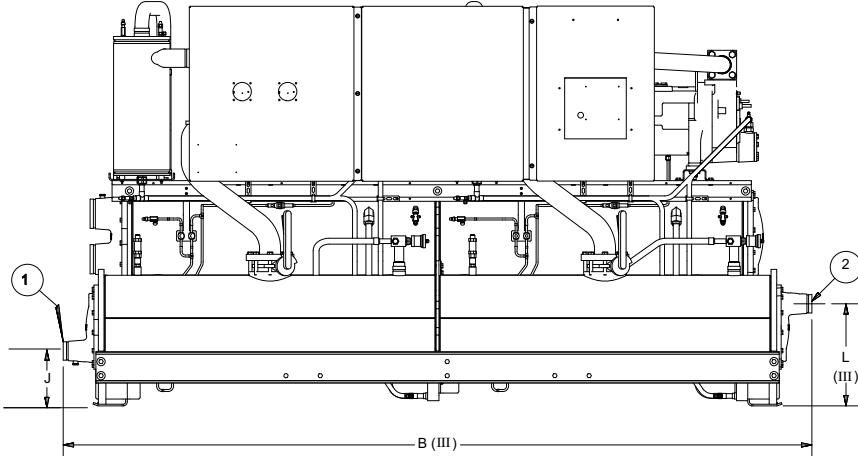

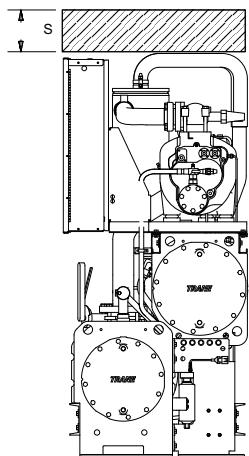

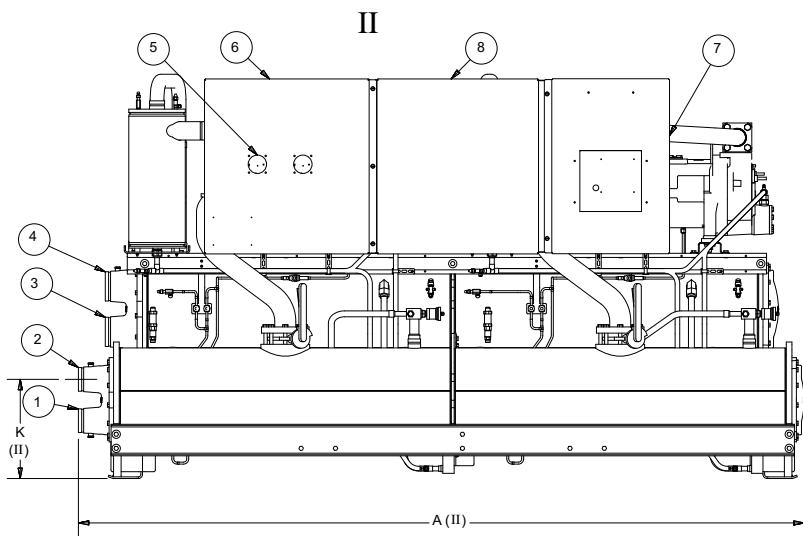

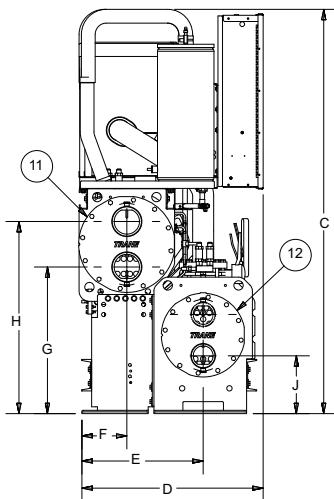

**Table 61. RTWD/RTUD Layout Notes**

1A1	Dyna View main processor interface	** 1K3	Contactor, compressor 1A short.
1A2	Power supply module.	** 1K4	Contactor, compressor 1A transition.
1A3	Starter module, compressor 1A.	1K5	Contactor, compressor 2A start.
1A4	Starter module, compressor 2A.	** 1K6	Contactor, compressor 2A run.
1A5	Dual low voltage input, external auto stop and emergency stop inputs.	** 1K7	Contactor, compressor 2A short.
1A6	Dual low voltage input, external circuit lockout, refrigerant circuit 1 and 2.	** 1K8	Contactor, compressor 2A transition.
* 1A7	Analog input/output, external current limit and external chilled water or hot water setpoint inputs.	* 1Q1	Disconnect switch, power distribution.
* 1A8	Analog input/output, condenser control and compressor % RLA output.	* 1Q2	Circuit breaker, power distribution.
* 1A9	Dual low voltage input, LCI-C communications (Echelon).	* 1Q3	Disconnect switch, power distribution.
* 1A10	Dual low voltage input, ice machine control and heat mode control.	* 1Q4	Circuit breaker, power distribution.
* 1A11	Dual high voltage input, motor thermostats compressor 2A and 1A.	** 1R1	Resistor, transition, compressor 1A, line A.
* 1A12	Dual relay output, ice making status.	** 1R2	Resistor, transition, compressor 1A, line B.
* 1A13	Quad relay outputs, unit status programmable relays.	** 1R3	Resistor, transition, compressor 1A, line C.
1A14	Dual relay output, condenser and chilled water pump relays.	** 1R4	Resistor, transition, compressor 2A, line A.
* 1A15	Dual high voltage input, condenser and chilled water flow and interlock.	** 1R5	Resistor, transition, compressor 2A, line B.
1A16	Dual triac output, modulating unload and load compressor 2A.	** 1R6	Resistor, transition, compressor 2A, line C.
1A17	Dual triac output, step load control compressor 2A and 1A.	1T1	Transformer, control power.
1A18	Dual triac output, modulating unload and load compressor 1A.	1T2	Transformer, current, compressor 1A, line A.
1A19	Dual high voltage input, high pressure cutout compressor 2A and 1A.	1T3	Transformer, current, compressor 1A, line B.
1A20	Dual triac output, oil return gas pump drain and fill, circuit 2.	1T4	Transformer, current, compressor 1A, line C.
1A21	Dual triac output, oil return gas pump drain and fill, circuit 1.	1T5	Transformer, current, compressor 2A, line A.
*** 1A22	Dual high voltage input, panel ventilation.	1T6	Transformer, current, compressor 2A, line B.
1A23	Dual low voltage input, oil loss level.	1T7	Transformer, current, compressor 2A, line C.
* 1A24	Dual low voltage input, water flow sensor.	* 1T8	Transformer, potential, under/over voltage - power meter, line A to B.
* 1A25	Quad relay outputs, circuit 1 fan control.	* 1T9	Transformer, potential, power meter, line B to C.
* 1A26	Quad relay outputs, circuit 2 fan control.	* 1T10	Transformer, potential, power meter, line A to C.
* 1A27	Analog input/output, fan speed control.	* 1T11	Transformer, potential, power meter, line A to B.
* 1A28	Dual low voltage input, fault feedback.	* 1T12	Transformer, potential, power meter, line B to C.
*** 1B21	Thermostat, panel ventilation	* 1T13	Transformer, potential, power meter, line A to C.
*** 1M3	Motor, ventilation fan.	1T14	Transformer, potential, power meter, line A to B.
1F13	Fuse, potential transformer primary, compressor 1A, line A, under/over voltage - power meter.	1X1	Power distribution block.
1F14	Fuse, potential transformer primary, compressor 1A, line B, under/over voltage - power meter.	* 1X2	Power distribution block.
1F15	Fuse, control power transformer secondary, 115 V.	1X4	Terminal strip, customer control wiring.
1F16	Fuse, control power transformer secondary, 27 V.	1X5	Terminal strip, factory control wiring.
1F17	Fuse, control power transformer secondary, 27 V.	* 1X6	Terminal strip, factory power meter wiring.
* 1F18	Fuse, potential transformer primary, compressor 1A, line C, power meter.	* 1X7	Power distribution block.
* 1F19	Fuse, potential transformer primary, compressor 2A, line A, power meter.	* 1X8	Power distribution block.
* 1F20	Fuse, potential transformer primary, compressor 2A, line B, power meter.	1X9	Terminal strip, water flow sensor control wiring.
* 1F21	Fuse, potential transformer primary, compressor 2A, line C, power meter.	*** 1X10	Terminal strip, ventilation.
1K1	Contactor, compressor 1A start.	* 1X11	Terminal strip, fan control.
** 1K2	Contactor, compressor 1A run.	* 5B18	Temperature sensor, outdoor air temperature.

Notes: Refer to RTWD/RTUD electrical schematic for specific electrical connection information and notes pertaining to wiring installation.

\* - Optional components; may not be present on all units. \*\* - Wye-delta components; may not be present on all units. \*\*\* - Only present when ventilation is required.

# Mechanical Specifications

## General

Exposed metal surfaces are painted with air-dry beige, direct-to-metal, single-component paint. RTWD units ship with full operating charges of refrigerant and oil. RTUD units ship with a full operating charge of oil and a nitrogen holding charge. Molded elastomeric isolation pads are supplied for placement under all support points.

Trane air-cooled condenser structural elements and fan sections are galvanized steel.

## Compressor and Motor

The unit is equipped with two semi-hermetic, direct-drive, 3600 rpm 60 Hz (3000 rpm 50 Hz) rotary compressors that include a load/unload valve, rolling element bearings, oil filtration device and heater. The motor is a suction gas-cooled, hermetically sealed, two-pole squirrel cage induction motor. Oil separator device is provided separate from the compressor. Check valves in the compressor discharge and lube oil system and a solenoid valve in the lube system are also provided.

## Unit-Mounted Starter

The unit is supplied with a UL 1995 indoor type enclosure with top power-wiring access and three-phase, overload protection. The starter is available in a wye-delta or across-the-line configuration, factory-mounted and fully pre-wired to the compressor motor and control panel. A factory-installed, factory-wired 820 VA control power transformer provides all unit control power (120 Vac secondary) and Trane CH530 module power (24 Vac secondary). Optional starter features include circuit breaker, high fault panel with circuit breaker, or mechanical, non-fused disconnect.

## Evaporator

Dual circuited, shell and tube falling film evaporator design is used. Seamless internally finned, copper tubes are mechanically expanded into tube sheets and mechanically fastened to tube supports. Evaporator tubes are 1.0 inch (25.4 mm) diameter on standard efficiency chillers and 0.75 inch (19.05 mm) diameter on high and premium efficiency chillers. All tubes can be individually replaced.

Shells and tube sheets are made of carbon steel. Designed, tested, and stamped in accordance with ASME code. The evaporator is designed for refrigerant-side/working-side pressure of 200 psig (13.8 bars).

All water pass arrangements are available with grooved connections with 150 psig (10.5 bars) waterside working pressure. Waterside shall be hydrostatically tested at 225 psig (15.5 bars).

## **Condenser (RTWD only)**

Dual circuited, shell and tube condenser designed with seamless internally/externally finned tubes expanded into tubesheets and mechanically fastened to tube supports. Condenser tubes are 1.0 inch (25.4 mm) diameter on standard efficiency chillers and 0.75 inch (19.05 mm) diameter on high and premium efficiency chillers. All tubes can be individually replaced.

Shells and tube sheets are made of carbon steel. Designed, tested, and stamped in accordance with ASME code. The condenser is designed for refrigerant-side/working-side pressure of 300 psig (20.7 bars).

Water side has single inlet and outlet piping connection. All water pass arrangements are available with grooved connections with 150 psig (10.5 bars) waterside working pressure. Waterside shall be hydrostatically tested at 225 psig (15.5 bars).

Standard temperature condenser allow for leaving condenser water temperature up to 105°F (40.6°C) and for entering condenser water temperatures up to 95°F (35°C).

## **Condenser (Trane air-cooled only)**

Air-cooled condenser coils have aluminum fins mechanically bonded to internally finned seamless copper tubing. The condenser coil has a subcooling circuit. Condensers are factory proof and leak tested at 400 psig (27.6 bars).

Direct-drive vertical discharge condenser fans are balanced. Three-phased condenser fan motors with permanently lubricated ball bearings and inherent overheat protection in each phase are provided.

Standard ambient units start and operate from 32°F to 125°F (0°C to 52°C).

## **Refrigerant Circuit**

Each unit has two refrigerant circuits, with one rotary screw compressor per circuit. Each refrigerant circuit includes compressor suction and discharge service valves, liquid line shut off valve, removable core filter, charging port and an electronic expansion valve. Modulating compressors and electronic expansion valves provide variable capacity modulation over the entire building load and maintain proper refrigerant flow.

## **Oil Management**

The unit is configured with an oil management system that ensures proper oil circulation throughout the unit. The key components of the system include an oil separator, oil filter and gas pump. An optional oil cooler is installed when the unit is used for high condensing temperature or low evaporator temperature conditions. For example: remote condensers, heat recovery, water-to-water heat pump, ice making and low temperature process applications.

## **Unit Controls (Trane CH530)**

The microprocessor-based control panel is factory-installed and factory-tested. The control system is powered by a pre-wired control power transformer, and will load and unload the chiller through adjustment of the compressor slide valve. Microprocessor-based chilled water reset based on return water is standard.

The Trane CH530 microprocessor automatically acts to prevent unit shutdown due to abnormal operating conditions associated with low evaporator refrigerant temperature, high condensing temperature, and/or motor current overload. If an abnormal operating condition continues and the protective limit is reached, the machine will shut down.

## Mechanical Specifications

---

The panel includes machine protection shutdown requiring *manual reset* for the following conditions:

- Low evaporator refrigerant temperature and pressure
- High condenser refrigerant pressure
- Low oil flow
- Critical sensor or detection circuit faults
- Motor current overload
- High compressor discharge temperature
- Lost communication between modules
- Electrical distribution faults: phase loss, phase imbalance, or phase reversal
- External and local emergency stop
- Starter transition failure

The panel also includes machine protection shutdown with *automatic reset* for the following correctable conditions:

- Momentary power loss
- Under/over voltage
- Loss of evaporator or condenser water flow

When a fault is detected, the control system conducts more than 100 diagnostic checks and displays results. The display will identify the fault, indicate date, time, and operating mode at time of occurrence, and provide type of reset required and a help message.

## Clear Language Display Panel

Factory-mounted to the control panel door, the operator interface has an LCD touch-screen display for operator input and information output. This interface provides access to the following information: evaporator report, condenser report, compressor report, ASHRAE Guideline 3 report, operator settings, service settings, service tests, and diagnostics. All diagnostics and messages are displayed in clear un-coded language.

Data contained in available reports includes:

- Water and air temperatures
- Refrigerant levels and temperatures
- Oil pressure
- Flow switch status
- EXV position
- Head pressure control command
- Compressor starts and run-time
- Line phase percent RLA, amps, and volts

All necessary settings and setpoints are programmed into the microprocessor-based controller via the operator interface. The controller is capable of receiving signals simultaneously from a variety of control sources, in any combination, and priority order of control sources can be programmed. The control source with priority determines active setpoints via the signal it sends to the control panel. Control sources may be:

- Local operator interface (standard)
- Time of day scheduling (optional capability available from local operator interface)
- Hard-wired 4-20 mA or 2-10 Vdc signal from an external source (interface optional; control source not supplied)
- LonTalk™ LCI-C (interface optional; control source not supplied)
- Trane Tracer Summit™ system (interface optional; control source not supplied)

## Quality Assurance

The quality management system applied by Trane has been subject to independent third-party assessment and approval to ISO 9001. The products described in this catalog are designed, manufactured and tested in accordance with the approved system requirements described in the Trane Quality Manual.

# Options

### **Base Rail Forklifting**

Channels built into the base frame allow for easy movement using a forklift

### **Dual Relief Valve**

Unit comes with dual relief valves on both the high pressure side and low pressure side of each refrigerant circuit. Each dual relief valve configuration includes an isolation valve. Single relief valves are standard.

### **Flanged Water Connection Kit**

Kit to convert all four water connections (RTWD units) or two water connections (RTUD units) from grooved pipe to flanged connections. This includes: grooved couplings, pipe offsets, and grooved to flange adapters.

### **Factory Installed Flow Switches**

Factory installed IMF effector flow switches for the evaporator and/or condenser.

### **High-Temperature Condenser**

Optimized compressors, oil cooler and high condenser temperature control panel allows for leaving condenser water temperatures up to 140°F (60°C). This option is required for entering condenser water temperatures above 95°F (35°C).

### **Insulation**

The evaporator, water boxes, and motor housing are covered with factory installed 0.75 inch (19.05 mm) insulation. Factory installed foam insulation is used on the suction line, liquid level sensor, oil return system assembly (with its associated piping).

## Options

---

### **Insulation for High Humidity**

The evaporator and water boxes are covered with factory installed 1.5 inch (38.1 mm) insulation. Factory installed foam insulation is used on the motor housing, suction line, liquid level sensor, and oil return system assembly (with its associated piping).

### **Isolators**

Molded elastomeric isolators ship with the unit.

### **Low-Temperature Evaporator**

Optimized compressors and oil cooler enable evaporator operation down to minimum leaving water temperature of 10°F (-12.2°C).

### **Nitrogen Charge**

Unit is shipped with a nitrogen holding charge in lieu of refrigerant (standard for RTUD).

### **Performance Tests**

Performance tests are available to certify chiller performance before shipment.

### **Two-Way Condenser Water Regulating Valve (RTWD only)**

For water regulation, a field-installed, 2-way butterfly-type (lug-style) valve, with integral electrical operator and factory-mounted valve actuator, is available. The single-phase, dual frequency 50 or 60 Hz, motor can be selected with 115 V (can be powered directly from control power transformer at unit) or 220 V power. The 2-way valve is field-wired and controlled by the chiller regulating valve control output. Valves are available in 3 and 4 inch (88.9 mm and 114.3 mm) sizes.

### **Seismic Rating**

The unit will be seismically rated.

### **Water-to-Water Heat Pump**

Optimized compressors, oil cooler and high condenser temperature control panel allows for leaving condenser water temperatures up to 140°F (60°C). This option allows for entering condenser water temperatures above 95°F (35°C). Condenser leaving water temperature control option is required; the setpoint range is 80°F (26.7°C) to 140°F (60°C).

## **Electrical Options:**

### **Across-the-Line Starter**

Across-the-line starter is unit mounted with a UL 1995 gasketed enclosure.

### **Wye-Delta Starter**

This option provides a reduced-inrush, unit mounted starter with a UL 1995 gasketed enclosure. Wye-delta starters are standard with 200–230 V machines.

### **Circuit Breaker**

A molded case standard interrupting capacity circuit breaker, factory pre-wired with terminal block power connections and equipped with a lockable external operator handle, is available to disconnect the chiller from main power.

### **High Fault Rated Control Panel with Circuit Breaker**

A molded case circuit breaker, factory pre-wired with terminal block power connections and equipped with a lockable external operator handle, is available to disconnect the chiller from main power. The control panel has a higher short circuit rating as determined by UL 508.

**Non-Fused Disconnect**

A non-fused molded case disconnect switch, factory pre-wired with terminal block power connections and equipped with a lockable external operator handle, is available to disconnect the chiller from main power.

**Dual Point Power Connection**

Unit is available with either dual or single point power connections.

**Under/Over-Voltage Protection**

Unit receives protection against variations in voltage (current lag and spike protection is standard).

## Control Options:

**A/C Fan Control (RTUD only)**

Fan controls are integral to the chiller panel and shall manage the appropriate relays and variable speed fan outputs to control the differential pressure.

**BACnet Interface**

BACnet communications capabilities are available, with communication link via single twisted-pair wiring to communication board.

**Chilled Water Reset – Outdoor Air Temperature**

Controls, sensors, and safeties allow reset of chilled water temperature, based on temperature signal, during periods of low outdoor air temperature (chilled water reset based on return chilled water temperature is standard). Standard for RTUD units.

**Condenser Leaving Water Temperature Control (RTWD only)**

Enables the unit to use the leaving condenser water temperature to load and unload the chiller relative to the leaving condenser water setpoint. The control system allows for a condenser leaving temperature range of 80°F (26.7°C) to 140°F (60°C) with a water to water heat pump.

**Condenser Differential Pressure Output (RTWD only)**

Provides a 2–10 Vdc signal based on the system refrigerant differential pressure and time at the differential with customer defined endpoints.

**Condenser Pressure (%HPC) Output (RTWD only)**

Provides a 2–10 Vdc output that is a function of percent high pressure cutout for condenser pressure. The percent high pressure cutout for condenser pressure indication output is based on the condenser refrigerant pressure transducer(s).

**Condenser Water Control Output (RTWD only)**

Provides a highly configured signal designed to control a condenser water regulating valve.

**External Chilled Water or Hot Water Setpoint**

External chilled or hot water setpoint signal can be field wired to a factory-installed, tested interface board through a 2–10 Vdc or 4–20 mA signal.

**External Current-Limiting**

External current-limit setpoint is communicated to a factory-installed, tested communication board through a 2–10 Vdc or 4–20 mA signal.

## Options

---

### **LonTalk/Tracer Summit Interface**

LonTalk (LCI-C) or Tracer Summit communications capabilities are available, with communication link via single twisted-pair wiring to factory-installed, tested communication board.

### **Low Ambient Fan Control - Two Speed (RTUD only)**

The fan control shall provide for the first fan to be a two speed fan and the microprocessor can be programmed to control the low and high speed of that fan.

### **Low Ambient Fan Control - Variable Speed (RTUD only)**

The fan control shall operate a fixed speed fan or a single inverter driven fan and the controls include the enabling and speed command signals to the variable speed inverter.

### **Motor Current Analog Output**

Control system indicates the active chiller percent of full run load amps, based on a 0–10 Vdc.

### **Power Meter**

Tracks energy consumption (compressors only) with kWh meter.

### **Programmable Relays**

Predefined, factory-installed, programmable relays allow the operator to select four relay outputs. Available outputs are: Alarm-Latching, Alarm-Auto Reset, General Alarm, Warning, Chiller Limit Mode, Compressor Running, Head Pressure Relief Request, and Tracer Control.

### **Time of Day Scheduling**

Time of day scheduling capabilities are available for scheduling single chiller applications through Trance CH530 panel (without the need for building automation system-BAS). This feature allows the user to set up to 10 events in a 7 day time period.

## **Trane Air-Cooled Remote Condenser Options (RTUD only)**

### **Low Ambient**

Allows the condenser to start and operate down to 14°F and up to 125°F (-10°C-52°C).

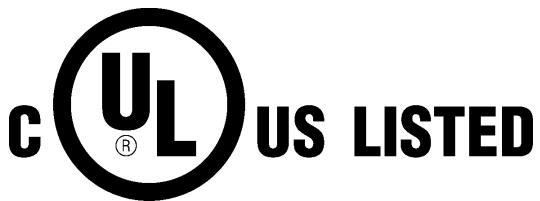

### **Condenser Voltage**

Voltages available 208-230, 460, and 575.

### **CompleteCoat Condenser Coil**

Allows for the operation in coastal environments. This option includes condenser coil box coating that resists bi-metallic corrosion.
